SECTION III-D

SEVEN-YEAR CAPITAL IMPROVEMENT PLAN

FISCAL 2011 – 2017

Rutgers, The State University The University of Medicine and Dentistry of New Jersey New Jersey Institute of Technology Rowan University

HIGHER EDUCATION

Overview

The New Jersey system of higher education is committed to enabling all people to achieve their maximum potential, fostering democratic principles, improving the quality of life, and supporting the State's success in a global economy. By placing teaching and learning at the core of its mission, the higher education system in New Jersey prepares individuals for fulfilling lives, rewarding careers, and lifelong learning; through research, colleges and universities enhance teaching and learning, increase knowledge, improve the human condition, and enhance the economy. Many institutions also provide community service, work with local schools and organizations, sponsor recreational and cultural events, and offer technical assistance to small businesses.

In addition to promoting personal and intellectual growth, the higher education system bestows economic benefits to the State. By providing an educated and skilled workforce, developing new technologies through research, and devising new partnerships with private enterprise, the system attracts new businesses, creates jobs, and promotes economic growth. New Jersey has more scientists and engineers per capita than any other state and is an international leader in corporate research and development. Overall, the State has a higher than average number of executives, administrators and managers, and a lower than average concentration of workers in service occupations.

The Higher Education Restructuring Act of 1994

The Higher Education Restructuring Act of 1994 created the current system of higher education in New Jersey. It is a tripartite structure consisting of the Commission on Higher Education, the New Jersey Presidents' Council, and the higher education institutions.

The Commission on Higher Education

The purpose of the Commission on Higher Education is to coordinate, plan, and develop policy, and serve as an advocate for the State's higher education system in concert with the New Jersey Presidents' Council. The Commission conducts research and coordinates statewide accountability efforts to provide data and programs on higher education performance, programs, and initiatives. This enhances the capacity and competitiveness of the institutions, increases access to higher education for all socio-economic groups, and improves linkages between secondary schools, higher education facilities, and two-year community colleges.

The Presidents' Council

The Presidents' Council is an advisory body composed of the presidents of all public colleges and universities and those independent institutions that receive State aid. The Council makes recommendations on new programs, budgets, student aid levels, licensure, and the statewide higher education plan. It also advises the Administration, the Legislature, and the Commission on Higher Education on specific issues affecting higher education.

Colleges and Universities

The higher education system is comprised of 12 four-year public colleges and universities, 19 community colleges, and 26 private institutions. The State's 12 senior institutions operate autonomously, governed by their boards of trustees. Each of the senior public institutions has clearly defined missions that offer diverse opportunities to students. These include undergraduate, graduate, and professional degree programs, research facilities, academic support assistance, non-credit offerings, and training and continuing education programs. In addition to promoting their educational missions, colleges and universities provide cultural and recreational activities to communities through theater performances, concerts, guest speakers, and sports events.

Community Colleges

The community colleges play a vital role in the higher education system by providing two-year associate degrees in specific fields, continuing education programs, and skill improvements options. For many of their students, the community colleges also serve as a gateway to higher-level degrees through transfers to four-year institutions.

Student Assistance Programs

New Jersey is dedicated to the principle that higher education should be accessible to all – regardless of their socio-economic status. Consequently, financial assistance is provided under the auspices of the Higher Education Student Assistance Authority, including need-based and merit-based funding, specialty grants, federal student loans, and a tax-free saving incentives program for student attending colleges in New Jersey.

Rutgers University has over 800 buildings on its three main campuses and throughout the state. The building inventory includes everything from high tech lab and research facilities to historic landmark buildings and agricultural farm structures. A large number of these buildings were built between 1953 and 1972, and substantial resources are required to preserve and maintain these facilities for their intended use. A significant number of projects involve the repair and replacement of obsolete heating and cooling systems in these buildings.

Replace Drain Waste and Vent Lines for 2 Acid Neutralization Systems - The drain, waste and vent piping serving these systems is 30 years old and has exceeded its serviceable life. Failure would disrupt service and increase operational cost due to required system repairs. There is also potential for contamination and Indoor Air Quality issues resulting from system leaks.

Existing motor control centers are over 31 years old and no longer supported by the manufacturer (Allis Chalmers). They are critical to the operation of HVAC equipment and pumps for University Hospital. This project would purchase replacement stock - 2 each of size #1 through #5 as manufactured by Cutler Hammer. Failure has and does interrupt HVAC and other building services for extended periods.

		er 50 years old and	<i>Decrease:</i> \$0 has well exceeded	its serviceable life	. Failure would resu	ult in a loss of elevator	
Dept Priority 4 Project ID: 7 Project Type C	.7 LOCA ⁻ 75B404	E MAIN DISTRIBU	CAMPUS				
General:	\$4,471	\$4,471	\$0	\$0	\$0		
Sub-Total:	\$4,471	\$4,471	\$0	\$0	\$0		
Operating Impact: Increase: \$0 Decrease: \$0 Replace Campus Main Distribution Switchgear, Including 26,400 Volt Air Blast Circuit Breakers And Tie Switch - All of this equipment is over 35 years old and the manufacturer (GE) no longer supports this equipment with parts or service. New main switchgear will separate campus electric distribution into three parts: Library Vault, Dental Vault and BHSB/Cancer Center/Ambulatory Care Center Vault. Failure of this switchgear would cause a loss of electrical power to the Newark campus.							
PHYSICAL PL	ANT - NEWARK

Replacement of 30 year old galvanized and victolic water main piping and fittings, which have exceeded their serviceable life. There have been 3 failures on campus in recent history, one near catastrophic event, due to electrolysis between the victolic and copper connections. In addition, the system requires zone valves to isolate floors, if needed. Failure would and did compromise life/safety and caused major flooding, interruption in service and increased operational cost for research and education.

The condensate pans on the air handlers serving the Medical Science Building are original to the facility and have exceeded their serviceable/repairable life span. Failure would disrupt HVAC service at the Medical Science Building and also has the potential for water damage throughout the facility, as these units are on the D and G Levels. Its proposed to build a containment around units and water proof. ***IMMEDIATE NEED***

Another core facility that would house equipment needed by a number of basic science laboratories at SOM to study various aspects of cell biology. These would include cell cycle analysis, signal transduction, cell development and related aspects. SOM Basic Sciences does not have any of this equipment, nor do the faculty have ready access to this equipment. As the Basic Science faculty grows, the need for this equipment will be even greater. A fiscal investment at this level will be a first for us in terms of expanding our limited infrastructure. These needed items will also aid tremendously in our recruitment effort to attract additional, competitive and federally funded investigators to our School.

To ensure that University Hospital is fully prepared to meet its mission and responsibilities, the hospital must replace its emergency support, life safety and emergency mechanical systems. With much of the existing equipment aged (with critical components more than 30 years old) and no longer suitable to meet the needs of today's sensitive equipment, the capacity of the system no longer supports the emergency needs of the hospital. Failure to replace and upgrade the system has begun to compromise the hospital's ability to continue providing a full range of critical medical services and could severely jeopardize its ability during public emergencies to provide "surge capacity" for intensive care, trauma care and isolation requiring use of monitoring equipment, ventilators, etc. This would negatively impact every New Jersey State agency that relies on the hospital to coordinate medical services and serves as a major trauma provider. In addition, the hospital would not be able to meet its obligation under its agreement with the CDC.

Replacement of end of life mobile data/automatic vehicle location system terminals currently in EMS units, the present systems is at the end of its life cycle and will not meet FCC narrow-band requirements as of 2009 this will result in it being necessary to obtain needed capital equipment replacement costs. In addition the system replacement will allow for EMS performance goals and the continued reduction in response times to medical emergencies.

Replacement and maintenance of current EMS dispatch system with the goal of maintaining system performance and reliability with the aim of reduction of cost through the use of present and emerging technologies; which will allow for system redundancy and to ensure continuity of operations during day to day operations as well other natural and manmade disasters this will result in it being necessary to obtain needed capital equipment replacement costs.

The connecting structure between the CABM Building and School of Public Health is over 15 years old, and has deteriorated over the years. The stone facade has deteriorated beyond repair along the roof allowing water to infiltrate into the building with every rain event. The connecting structure needs to be replaced.

The UMDNJ Robert Wood Johnson Library in New Brunswick serves the information access needs of the entire New Brunswick campus. The RWJ Library's user group has increased significantly and cannot be accommodated by the existing 7,500 square feet structure currently in place. This project will expand the Library by 25% through the inclusion of an adjoining room, outside building walkways, and the construction of a 24-hour computer room in the MEB lobby. In addition, the redesign and renovation of the existing space is proposed.

The University of Medicine and Dentistry of New Jersey would like to install a Mass Emergency Notification System on all UMDNJ campuses. This scope includes inventory and assessment of existing emergency communication systems, Schematic Design and installation of a Mass Emergency Notification System utilizing a Common Alerting Protocol (CAP) methodology. Schematic Design will be conceived in a manner that will integrate existing and proposed systems in a manner that will facilitate a phased implementation.

Systems being considered include but are not limited to: Amber Strobe Lights to signal emergency, LED Text Message Signs, Security Alarm Panic Buttons, Emergency Call Stations, Audible Signal, Outdoor Horns, Speakers, Voice Evacuation, LCD/Plasma Flat Panel Displays, MutualLink.

As a result of significant enrollment increases in the Accelerated BSN, MSN program and the newly developed DNP program at the Newark campus, the computer lab and classrooms can no longer accommodate the needs for large classes in class instructions, online learning and computerized nursing licensure testing. The proposed renovation/expansion along with the technology upgrades will provide sufficient space and adequate educational infrastructure to support the students and faculty. Due to class sizes, curriculum requirements and campuses at opposite ends of the state, smart classrooms with updated AV systems and videoconferencing are essential tools for cost efficiency, quality of learning, collaboration processes and to the overall success of the programs.

The vast majority of dental offices have integrated the use of computers into practice for maintaining patient records. The dental facility in Scotch Plains is not equipped with computer or the needed infrastructure to support the use of such technology. To provide the needed experience to students in the utilization of computer technology to support patient care and to provide a current system of monitoring and tracking patient information and records of clinical care the Department is making this request.

The University's current data center cannot support existing demand. The data center facility is to be located in the Bergen Street parking deck and is designed as state-of-the-art providing 125 watts per sq. ft. of power, UPS capability, and power distribution with N+1 redundancy. It would allow for the expansion of UMDNJ's technology assets and personnel in an appropriately configured, safe and secure environment.

RWJMS departments and Institutes in both the Basic and Clinical Sciences are in the need of research equipment in support of the School's and University's research mission and goals. This equipment will support each department's research objectives, support new faculty recruitment and faculty retention and enhance the opportunity to attract extramural funding.

Essential to the growth of the research and clinical enterprises at RWJMS is the establishment and expansion of state-of-the-art core facilities. These cores include: Proteomics Core, Imaging Core, Transgenic Core, Electron Microscopy Core, Good Manufacturing Practice Core, General Clinical Research Center Core and Chemical Biology Core. These cores will provide services such as manufacturing of pharmaceutical and biotherapeutic agents for testing new drugs in patients; electron, multiphoton and confocal capabilities to image cells; development of transgenic animals for use in scientific experiments; and the ability for protein and DNA analysis.

With the completion of the Human Genome Projects, emphasis is shifting from the study of the gene to that of the protein, and thus to the science of Proteomics. It is believed that through Proteomics, new disease markers and drug targets can be identified that will help design products to diagnose, treat and prevent disease. The research of the clinical and basic scientists at the Medical School would be greatly enhanced if they had access an expanded Proteomics/Functional Genomics core facility. This facility would house the instrumentation and the technical and support staff of approximately 20,000 square feet.

Currently, we use a common hallway as our Dental Mechanical Shop. It is approximately 10 feet by 12 feet, much too small to complete our repair work. The entrance to an electrical switch gear room is inside of our shop, therefore we can not lock the shop. Ideally, we need a space approximately 20 feet by 20 feet. Our parts would be stored on several shelves with bins, so we could maintain an inventory and set reorder points. We would need 2 workbenches with storage above and below, a drill press, vise and grinder, compressed (drive) hot air, hot and cold water, vacuum and natural gas.

				te, not all offices ha	ave been upgraded	to the Meridian I phone

The New Jersey Dental School must upgrade its voice infrastructure. To date, not all offices have been upgraded to the Meridian I phone system, even though the University is already standardized on the PBX phone system. The new infrastructure would eliminate the antiquated analog/key telephone systems and would replace them with state-of-the-art digital technology, providing the user with many enhancements such as voice mail, conference call and intercom. Justification: Existing equipment is old and costly to maintain. New equipment will interface with the University-wide data network.

Construction of a stem cell research facility of approximately 100,000 square feet is proposed. It is expected the entire facility will be constructed as a sterile facility. Extensive bio-safety cabinets, building scale de-ionized water services, clean-room facilities (Class-1000), Un-interrupted Power Supply (UPS), and high capacity back-up power generation will be required. Additional service laboratories will be required to support shared analytic and synthetic needs of the research program.

The College's science facilities are housed in a four-story building constructed in 1975. The facility provides laboratories and classrooms for programs in Biology, Physics, Chemistry, Geology, Environmental Science, Computer Science and in Biochemistry. Ramapo's School of Theoretical and Applied Sciences enrolls as declared science majors 24% of the College's full-time students. Its educational programs are distinguished by the high quality of instruction and joint faculty/student research projects. A major upgrade of the existing building will enable the College to respond to high student demand and deliver increasingly complex and diverse science curricula in an enrollment that conforms with standards for space, equipment and health and safety. Work will include overhaul of the building's obsolete HVAC system; replacement of fume hoods, safety showers, and water treatment systems; and installation of new state-of-the-art laboratory furniture, equipment, audio visual systems and instrumentation.

Eiro protoction ov	norte apporally agre	o that automatic on	rinklara ranraaant ti	no oinglo most sign	viticant concet of a f	iro monogomont program

Fire protection experts generally agree that automatic sprinklers represent the single, most significant aspect of a fire management program. Properly designed, installed, and maintained systems can overcome deficiencies in risk management, building construction, and emergency response. They also enhance the flexibility of building design and use by increasing the overall safety. Fire sprinklers save lives and minimize loss of property

As recommended by the college's insurance company (FM Global) this project would entail the design, permitting, purchase and installation of an automatic sprinkler protection system. The coverage would include all existing academic buildings that are not presently protected by sprinklers.

This project involves a major retrofit of five (5) elevators serving the main academic core. These existing elevators are almost 40 years old. They are subject to frequent breakdown and lack up-to-date fire recall controls. The project also entails the installation of a new elevator in the college's main administration building that currently has no means of vertical transport to the second floor offices of the college's president and senior staff.

There are two existing chillers, a 1000-ton unit which is relatively new and a 500-ton unit that is nearing the end of its life cycle. There are three existing boilers. One is 16 years old and the other two are original (circa 1970) equipment; the older boilers are at the end of their useful life.

This project would involve replacement of one of the remaining original boilers, replacement of the 500-ton chiller with a 1000-ton unit and new recirculation pumps and replacement of failing heating exchangers and tube rediators throughout the campus. The equipment would give the college 100% heating and cooling redundancy, improve efficiency and reduce operating costs.

The College's telecommunications/networking infrastructure, the electronics and servers that make them functional are fundamental to the College's mission. The health and safety of students, faculty and staff; teaching and learning; and daily business functions are all dependent on a reliable and current technology infrastructure. A major technology upgrade will remediate current issues and limitations brought on by the age and lack of capacity of current systems and enable the College to respond to high demand for new technologies and applications. A major part of the request is to improve network and telecommunications security. Specific network infrastructure projects include: (1) Replace network electronics(non-residential)-\$1,700,000. (2) Fiber backbone wiring-\$1,000,000. (3) UPS Upgrades-\$200,000. (4) PBX System migration-\$700,000 (5) Voice over IP network electronics-\$720,000 (6) Voicemail unified message system upgrade-\$200,000 (7) Enhanced 911 services-\$90,000. Operating Ir Approximately or	-		Decrease: \$0	2 on the west and I	Route 287 on the ea	ast is undevelopable

Approximately one-third of the college's main campus bounded by Route 202 on the west and Route 287 on the east is undevelopable wetlands. Future capital expansion for academic, administrative, residential facilities and recreational space will require additional acreage.

Acquisition of property contiguous or nearby the campus will allow for planful development and create a buffer against private development that might conflict with college goals and objectives.

The construction of underground steam, chilled water and condensate lines to be housed inside a concrete tunnel, running between the central heating/cooling plant and main academic complex, will replace a 7' high line on concrete supports. The burial of these lines will allow for for development of property behind the Student Center and remove a visual eyesore that detracts from the aesthetics of the campus.
